

Release Notes for the TelluCare product family

Hi,

We are happy to inform you that the TelluCare product family version 6.6 has now been released 😊

TelluCare Digital Supervision - Users can see which users have completed an alarm in the alarm history list

Service responsible can now have an overview in the alarm history list who closed the alarm:

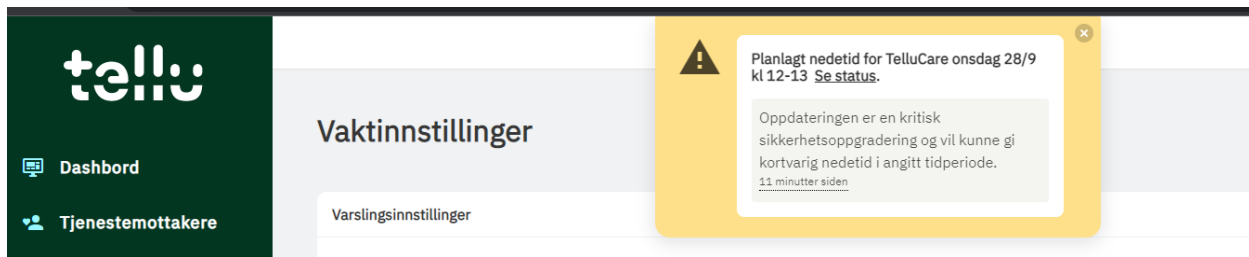

Last triggered	Status	Parent
5/31/2022, 13:56:22	Rejected	John Doe
5/25/2022, 13:21:29	Rejected	John Doe
5/11/2022, 14:21:46	Rejected	John Doe
5/6/2022, 21:14:24	Rejected	John Doe
5/6/2022, 11:13:47	Rejected	John Doe
5/6/2022, 11:02:55	Rejected	John Doe

This alarm was rejected by Brice Morin

TelluCare - Application status related to maintenance and incidents available in Tellucare

In case of incidents or maintenance we will now give updated status and related planned activities in TelluCare for all users.

TelluCare - Automatically download Azure AD user information from health services own Azure AD specified group

It is now possible to automatically synchronize users in TelluCare from Azure AD user groups for each health service. This makes authentication in TelluCare aligned with changes in primary AD.

The release also contains improvements including the following:

- Separate error message for incorrect EPJ config for a patient
- Include a log on alarms on notifications that have been sent
- Improved performance for response operator patient list
- Possibility to reboot camera from TelluCare
- Fixed error in observation history for patient
- Improved performance in query to fetch health providers
- Improved specific list views
- Other bug fixes and minor features

We appreciate your feedback on this release.

Best regards from
Tellu Product and DevOps teams
